

Uber Ride Analysis Report

1. Introduction

This project analyzes Uber ride booking data to identify patterns, trends, and insights using data science techniques.

2. Dataset Description

The dataset contains ride booking details such as date, time, vehicle type, booking status, ride distance, and payment method.

3. Data Cleaning

- Removed duplicate values
- Handled missing values using "Unknown"
- Converted date column to datetime format

4. Exploratory Data Analysis (EDA)

- Analyzed booking status distribution
- Checked vehicle type usage
- Studied ride distance patterns
- Analyzed payment methods

5. Visualizations

- Bar chart for booking status
- Vehicle type distribution chart
- Distance histogram
- Monthly ride trends

6. Key Insights

- Most rides are successfully completed
- Peak demand occurs in specific months
- Short-distance rides are more frequent
- UPI and Cash are widely used payment methods

7. Conclusion

The analysis helps understand customer behavior and can improve business decisions like pricing, driver allocation, and demand forecasting.
